

Nelson's CNC USA Product Catalogue 2026

Nelson's CNC USA Product Catalogue 2026

Welcome to our trade catalogue for builders, fabricators, fencing, balustrade and architectural businesses. It lists every end cap and hole plug size on our U.S. online store, with trade pricing per unit at each quantity tier.

Prices effective from October 2026. All prices are in USD and we provide free shipping on orders over \$50. The 1+ price is our current website price; volume tiers apply per SKU at 50+, 100+, 500+ and 1000+; for over 1000 please contact us. Account holders have access to a trade login. Email info@nelsonscnc.com to open a trade account.

For custom sized caps please email info@nelsonscnc.com or fill out the custom end cap form via our website www.nelsonscnc.com. We ship across the United States.

EASY INSTALL END CAPS

Aluminum End Caps made to tightly fit the end of Aluminum Tubing

Quality End Caps, made to last Nelsons CNC End Caps are made on CNC Machining centers to tightly fit aluminum tubing with precise quality. Each end cap is made in-house using premium quality 6060T5 Mill finished aluminum bar.

Easy to Install End Caps Simply tap our interference fit end caps into the end of your aluminum tubing using a rubber mallet. End caps are made to tightly fit the end of the aluminum tubing so they don't fall out*. Due to their tight fit no glue or weld is required. Aluminum end caps can be powder coated, wood grain imaged or anodized before or after installation. All end caps are custom made with 246 sizes currently available online. Commonly used to cap the ends of aluminum batten and slatted fences, balustrades, hand rails, and facades.

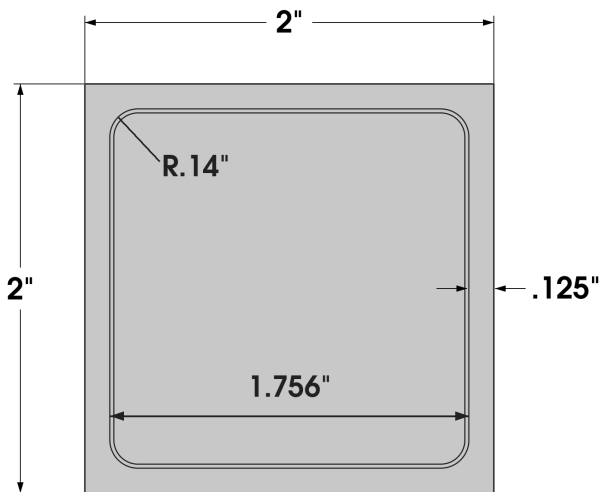

*End Cap will be a tight fit with no movement when installed correctly as per our installation instructions.

Interference Fit How It Works

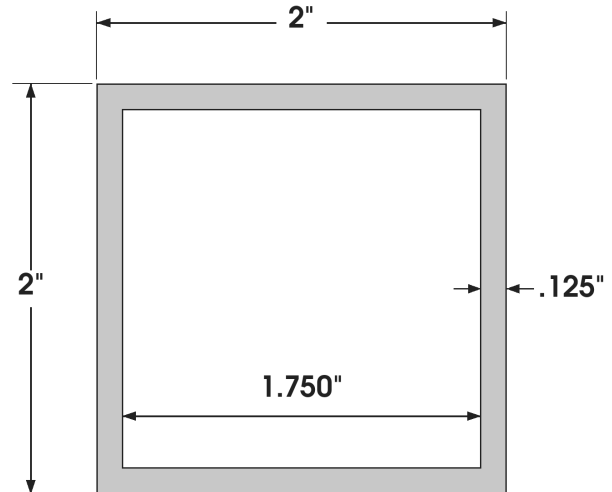

Every Nelsons CNC end cap has a machined island on its underside that is made slightly larger than the inside dimension of the aluminum tubing it fits. When the cap is tapped in with a rubber mallet, the island grips the tube walls. This is an interference fit: the cap is held tightly by the fit itself, with no screws, welds or glue.

End cap US22125SE

Top view: island 1.756" x 1.756", R.14" corners

2" x 2" x 0.125" square-edge tubing

Section: 2" OD, 0.125" wall, 1.750" inside

Island 1.756" vs tube inside 1.750" = 0.006" interference

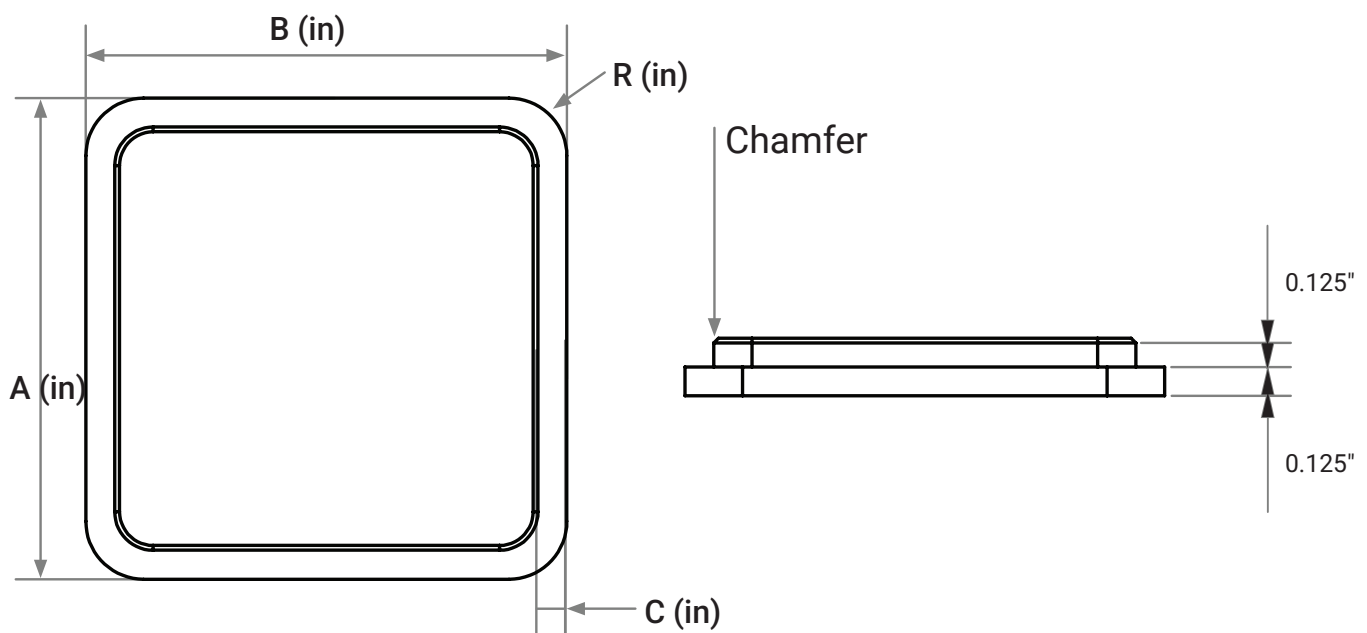

Both views are drawn at the same scale. The difference is real but very small, so it is not visible at this size.

The beveled edge on the underside of the island locates the cap and guides it into the tube. Tap it in until it sits flush for a clean, tight finish. Measure the inside dimension of your aluminum tubing, choose the matching end cap, and follow the installation instructions in this catalogue.

Square End Cap Radius Edge

Aluminum end cap with a radius edge that are designed to be knocked into the ends of aluminum SHS with a rubber mallet until firmly fitted, no adhesive or weld required*. Finish your project off with a long lasting quality cap, made in-house on our CNC machining centers with precise accuracy to guarantee a tight fit. A beveled edge on the underside makes for easy installation. This product is often used in the aluminum fencing and architectural industry. Easy installation, just tap into place. End caps can be powder coated, wood grain imaged or anodized before or after installation.

- A** External Dimension
- B** External Dimension
- C** Wall thickness
- R** Radius Edge

All End Caps are 0.25" in total thickness

* End Cap should be a tight fit with no movement when installed as per our installation instructions. Terms www.nelsonscnc.com/policies/terms-of-service

Rectangle End Cap Square Edge

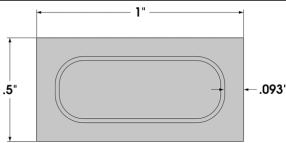

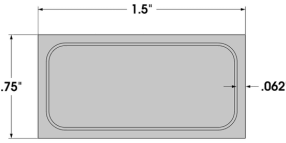

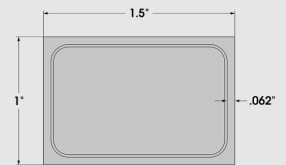

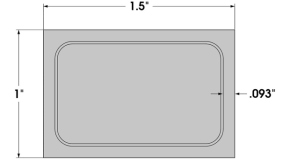

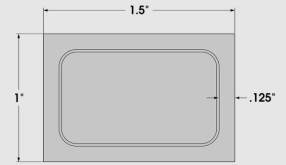

Aluminum end cap with a square edge that are designed to be knocked into the ends of aluminum RHS with a rubber mallet until firmly fitted, no adhesive or weld required*. Finish your project off with a long lasting quality cap, made in-house on our CNC machining centers with precise accuracy to guarantee a tight fit. A beveled edge on the underside makes for easy installation. This product is often used in the aluminum fencing and architectural industry. Easy installation, just tap into place. End caps can be powder coated, wood grain imaged or anodized before or after installation.

Round End Cap

Aluminum round end caps that are designed to be knocked into the ends of aluminum CHS with a rubber mallet until firmly fitted, no adhesive or weld required*. Finish your project off with a long lasting quality cap, made in-house on our CNC machining centers with precise accuracy to guarantee a tight fit. A beveled edge on the underside makes for easy installation. This product is often used in the aluminum fencing and architectural industry. Easy installation, just tap into place. End caps can be powder coated, wood grain imaged or anodized before or after installation.

- A** External Dimension
- B** Wall Thickness

All End Caps are 0.25" in total thickness

* End Cap should be a tight fit with no movement when installed as per our installation instructions.

Hole Plugs

CNC machined aluminum hole plugs are designed to tightly plug a hole that is usually drilled to make room for a fixing screw. The inner dimension of the plug will be the same diameter of the hole needing to be plugged. The outer dimension is slightly larger and is only 0.04" thick to leave a sleek, almost non-visible covering. Hole plugs are made to be knocked in with a rubber mallet firmly for a tight fit*, no adhesive or weld required. A beveled edge on the underside makes for easy installation.

MANUAL

Aluminum End Caps

Read and follow the instructions below during installation

1

Locate beveled edge
of end cap to seat position
onto aluminum tubing

2

Place end cap
on top of correct sized
aluminum tubing

3

Knock end cap
into aluminum tubing with
rubber mallet until firmly fitted

4

Fitted end cap
will sit tightly with no movement
when installed correctly

www.nelsonscnc.com

Nelsons CNC aluminum end caps are used in aluminum fencing, including pool fencing, gates, slat and batten screens, posts and rails, giving a clean, safe, flush, interference-fit finish. The caps are solely designed to fit in the end of aluminum tubing tightly without any weld or adhesive*. A beveled edge on the underside makes for easy installation. **Nelsons CNC USA Corp.**

To order online visit our website www.nelsonscnc.com

We ship across the United States.

Inquiries info@nelsonscnc.com

Phone (484) 398-9007 **Located** 16192 Coastal Highway, Lewes, DE 19958.

* Nelsons CNC Aluminum End Caps should be a tight fit with no movement when installed correctly as per our installation instructions. See terms below or visit www.nelsonscnc.com/policies/terms-of-service

Fitment and Installation of Aluminum End Caps

***(A) Correct permanent fitment of Nelsons CNC aluminum end caps is dependent on;**

- Correctly prepared profile edges of aluminum tubing.
- Correct aluminum end cap and profile dimensional synergy (refer to spec).
- aluminum end cap should be a tight fit with no movement after installation.
- aluminum end caps are intended for static (non-vibrational environment).
- Correct fitment can be affected by ambient climatic change, care should be taken to assess the location and safety of each item where such environmental conditions may cause adverse effects.
- Due to wear within aluminum tubing dimensions, anomalies can occur between material suppliers. If you experience variation in fitment contact Nelsons CNC to see if a more suitable fitment is available. (May be subject to custom order).

(B) Nelsons CNC USA Corp do not accept responsibility or liability for the installation of aluminum end caps regardless of location. If any conditions of install (A) are not met, please contact Nelsons CNC info@nelsonscnc.com. For full terms and conditions visit www.nelsonscnc.com/policies/terms-of-service
